<b>CCDC Complete Set</b>	\$725.00		\$850.00	

[www.SpecMarket.com](http://www.SpecMarket.com) CSC and BSD have established a strategic, North American alliance to better serve the construction industry with up-to-date and accurate specification content, time-saving software, and educational resources.

**MasterFormat®** is a master list of numbers and titles classified by work results or construction practices, used throughout the North American construction industry to organize project manuals, detailed cost information, and relate drawing notations to specifications.

**CSC/CSI Section & PageFormat** assists in the organization of specification sections by establishing a structure consisting of three primary Parts. These Parts organize text consistently within each section. **PageFormat** enhances the readability of specification sections, makes modifying a section easier, and brings visual uniformity to the specification page

**CSC Manual of Practice** The **MOP** is an effective resource for all participants in the construction industry, including owners, architects, engineers, contract administrators, product reps, financial institutions, facility managers, regulatory authorities. The planning, design, construction, and facility use process is inherently interdependent, and the MOP meets the needs of all participants.

**NMS (National Master Specifications)** The National Research Council of Canada (NRC) owns the **National Master Specification (NMS)**. The NMS, owned by the NRC is an easy-to-use framework for writing construction project specifications. The NMS is a reference document containing master specifications (available in both English and French) used by the federal government, other public organizations and the private sector.
