MEETING NOTICE

date: Tuesday, January 14, 2014

topic: **FM Changes - What does this mean?**
This presentation qualifies for self-directed OAA credits. (see more details inside)

speaker: Mr. Mike Ennis (Technical Director Single-Ply Roofing Industry, SPRI)

location: Toronto Skating Curling and Cricket Club
141 Wilson Ave., Toronto
(1 block east of Avenue Rd.)

time: 17:15 Cocktails
18:00 Dinner
19:00 Presentation

cost: \$45 (HST incl.) members,
\$50.00 (HST incl.) non-members
\$55.00 (HST incl.) at the door,
\$226.00 (HST incl.) Booklet of 6 dinner tickets (members only)

reserve: Please make your reservation with Donna Fournier
of the CSC Toronto Chapter Office at 1-888-494-9350.

info: Program Committee Officer: Chris Hunter (Tel: 647-529-5650)
Program Committee Officer: Bruce Hudson (Tel: 416-432-6502)

Tactile Warning Surface Tiles and the Application of CSA B651-12: Accessible Design for the Built Environment

By: Mark Clemmensen

Tactile warning/walking surfaces, by definition shall be installed in a manner that avoids interference from an irregular walking surface; and does not create a tripping hazard. It shall have its base surface level equal with the surrounding surface, or not more than 3mm (0.125") above or below it; be slip-resistant; and be colour-contrasted with the surrounding surface.

Mark Clemmensen
(Chair)

These surfaces are commonly used along the edge of transportation platforms, warning the pedestrians that they have come to the edge of the platform, ensuring that they don't stumble onto the tracks. You would recognize them as the colour-contrasting tiles with the raised dome pattern, or "truncated domes" as CSA B651 calls them, along the surface. Those installations are typically cast-in applications to ensure that the tiles base surface is level with the surrounding flooring materials in order to meet CSA B651 requirements.

There are only a handful of manufacturers that manufacture such tactile warning surface tiles in North America; two of which I would say hold the lion's share of the market and both manufacture products which meet the CSA B651 standard. Both manufacturers offer two types of installation methods: 1) "cast-in" recommended for new construction, allowing the warning surface tiles to be installed flush

with the surrounding surfaces - and 2) "surface-applied", recommended for retrofit applications, allowing the warning surface tiles to be installed on top of existing surfaces with mechanical fasteners and adhesive.

In the following case study, I will be discussing surface-applied products, and how available products on the market don't fully comply with CSA B651-12, as well as the issues that this arose on a project.

Project Case Study: An existing Government Building in Ontario, requested a design package for an exterior code-compliant update to its existing stairs located at the front of the building, connecting the front door to the municipal sidewalk. The budget was minimal but the client requested that any upgrades bring their existing conditions to "code standards", as the stair was installed over 40 years earlier. Another factor on the project was the construction schedule regarding site access. The General Contractor (GC) was only allowed on site during the weekends in order to minimize disruption during business hours, and allotted a three weekend window to complete the installation.

During the design stage, it was decided that railings would be installed as there were currently no railings, and that a warning surface would be installed at the edge of each stair tread and platform to meet CSA B651-12. To minimize cost and construction time on the project, it was decided that a surface-applied solution would be specified for the tactile warning surface tiles, and painted colour contrast strips would be applied to the edge of the stair treads.

Upon review of the surface-applied tactile tiles, it was discovered that there was a beveled edge around the perimeter of the tile to ease transition from adjacent surfaces when walking onto the tile. Also, it was discovered that the tile thickness was over the recommended thickness indicated in CSA B651-12. As indicated above, it was identified that CSA B651 required the base tile height not be greater than 3mm (0.125") and Edge Section below indicates that the manufactured surface-applied product was 0.18" thick, a difference of 0.07". *Continued on Page 3...*

Tactile Warning Surface Tiles and the Application of CSA B651-12: Accessible Design for the Built Environment (Cont.)

It was decided that the GC would scarify the existing concrete stair landings where the tactile warning tile was going to be applied, minimizing the height difference between the adjacent surfaces. Although this proposal would allow the surface-applied tile to meet the requirements of B651-12, it was going to open the door for other issues relating to water ponding and potential ice build up in the winter.

The bevel design of the tile, if inset into the scarified surface, would actually be lower than the surrounding concrete, and therefore could allow water build up between adjacent tiles in the bevel space. It was discussed with the manufacturer to remove the bevel edges prior to

shipping to the GC for installation, which was possible in theory, but it so happened that the outer dome spacing along the edge of the tile is exactly positioned at the midpoint. Therefore if two tiles were installed side-by-side, the spacing would be exactly the same between adjacent tiles as in the field of the tile. Removing the bevel edge would thus cause a 0.78" difference between adjacent tile truncated domes, which also doesn't comply B651-12.

It was finally agreed that the tactile tile would be inset 0.125" into the existing concrete landing, and the bevels would remain on the surface-applied tiles to allow installation of adjacent tiles without lengthy calculations of tile placement by the GC. A saw-cut was provided at each bevel joint to allow for water drainage between the adjacent tiles.

The project was installed without any further issues and within the required three weekend timeline and contract price.

Vice Chair's Message: Toronto Chapter Realignment

By: Kazim (Kaz) Kanani

Kazim (Kaz) Kanani
(Vice Chair)

Dear Toronto Chapter Members,

I would like to provide an update on some decisions made by the CSC Toronto Chapter Executive Committee with respect to governance of the Toronto Chapter. I am very proud and delighted to have the opportunity to serve alongside the dedicated team

we have in place as we continue to focus the efforts of CSC at the Toronto Chapter level as a membership organization focused on serving the members.

The Executive Committee, has approved what we call the realignment of the Executive Committee to a smaller core group of 15 by moving some of our positions to the subcommittee level. This approval came after months of discussions, ideas and feedback from within the Executive Committee including some now past members of the executive. Over the years the Toronto Chapter Executive Committee ballooned to over 20 dedicated individuals making it difficult to manage meetings, people and the overall governance.

You might ask how this is of benefit to you. Creating a smaller core group allows us to efficiently and effectively focus on the operational issues and allows the Executive Committee to be fully engaged with issues concerning membership, industry and permits us to work towards strengthening our commitment of education, communication and collaboration internally and externally.

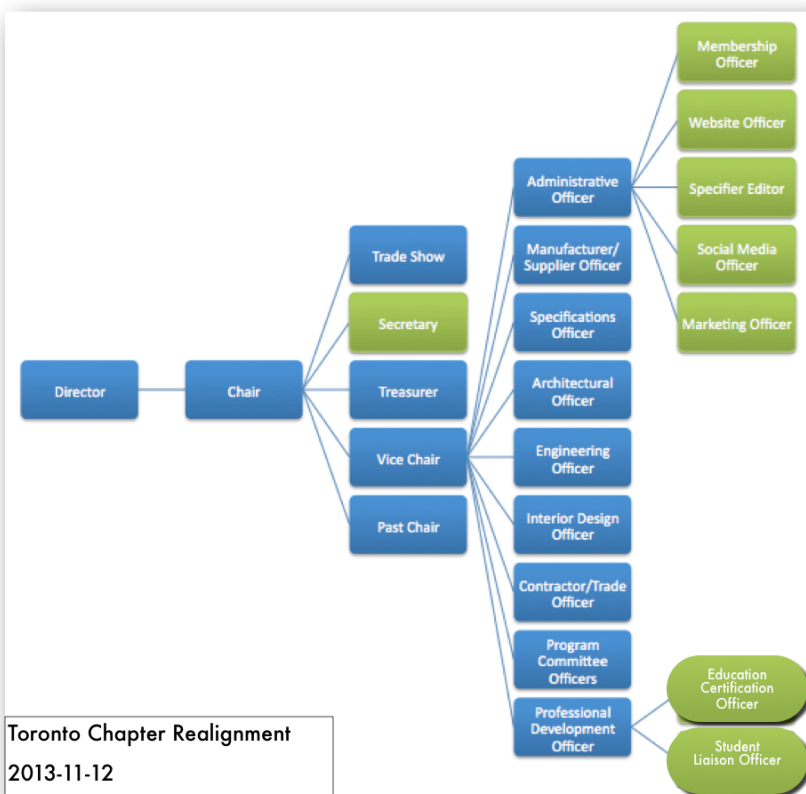

The Toronto Chapter Executive Committee is committed to serving the Toronto Chapter Membership and improving communications between the Executive Committee and Membership. As your Vice-Chair, I have taken on the responsibility of communicating changes, improvement and future plans with you and look forward to your constructive input for without having our membership engaged, we would not be able to function as an association.

Finally, the Toronto Chapter leadership is enhancing our longstanding tradition of collaborating with other organizations, bringing educational seminars and events so that our membership can network with

members from other organizations. CSC as a whole is a very unique organization in which we have a membership base from various different aspects of our industry which includes Architects, Specification Writers, Contractors, Contract Administrators, Technical (sales) Representatives and Engineers. Our goal is to collaborate with other organizations such as AATO, OAA, PEO, RCI and OBEC (to name a few) and offer events at member rates between associations and organizations. I will do my best to keep you informed and look forward to your continued support.

Volunteers are the life and breath of this association and we as Executive Committee members try our level best to appreciate and acknowledge the hard work put forth by not only the members of the Executive Committee but also volunteers of subcommittees and those working behind the scenes. I would ask that we (all members) collectively acknowledge the efforts of the volunteers as they commit their personal time, dedication and resources to making CSC the success it is.

Your input into the matters of this Chapter are valued and welcomed. Please do not hesitate to contact me at any time to discuss the initiatives of the Toronto Chapter and how we can collectively improve our Chapter.

36th Annual No Frills Trade Show

By: Bob Mercer

Bob Mercer
(Trade Show Chair)

The CSC Toronto Chapter Trade Show committee would like to invite you to participate in the 36th Annual "No Frills" Trade Show to be held on Wednesday, March 5, 2014 at the Metro Toronto Convention Centre. Please find attached in The Specifier, the CSC Toronto Chapter Trade Show registration form. Please print the form and send it along with your cheque to the CSC Toronto

Chapter Trade Show office at the address on the form as soon as possible in order to avoid disappointment. By the number of tables sold to date, we know from past experience that we will sell out quickly so please don't delay. If you know of a potential exhibitor that is not a member or is not aware of the exceptional opportunity and value of exhibiting at our NO FRILLS Trade show; please pass this information along.

The Committee is in top gear now and is working hard on making this another topnotch event that benefits both the exhibitors and attendees. We will be continuing with the CSC Lecture Series, which are one hour lectures on the show floor as well as a central networking area. Exhibitors can also request their table location on a first come basis.

Check out the Trade Show website www.csctradeshow.com and view the Trade Show brochure and registration form by clicking on "Forms". You can also register online as an exhibitor using your credit card or print the form and pay by cheque. Online attendee registration is also available.

If you have any questions, please feel free to email me or our show administrator Donna Fournier at djfournier@csctradeshow.com or phone/fax at 1-888-494-9350.

If you have already registered for the show, we thank you for your support. We hope to see you all at the 36th Annual CSC Toronto Chapter "No Frills" Trade Show!

6th Annual Curling Bonspiel Event

By: Dinshaw Kanga

Dinshaw Kanga
(Membership Officer)

This is the sixth year that the Toronto Chapter has organized our popular annual curling bonspiel on February 13, 2014 at the Toronto Cricket, Skating and Curling Club.

Before the curling begins, there will be about 20 minutes of curling lessons given by the club's professional staff especially for the benefit of novice curlers. Experienced curlers are allowed to go on the ice to start their practice.

The curling bonspiel will be followed by an hour of cocktails (Cash Bar) and networking. This will be followed by a sumptuous roast beef dinner. (Please advise us of any dietary restrictions)

Early registrations are highly recommended for this popular event especially if you want to form your own curling team/foursome.

Please refer to the Flyer and Registration Form in this Specifier for details regarding start time, dress code, dinner and payment information.

January 14, 2013

Changes to FM - What does this mean?

This Presentation qualifies for self-directed OAA Credits

THE TOPIC

This presentation will provide a background on FM Global and specific details of —FM Approvals Standard 4470, Single-Ply, Polymer-Modified Bitumen Sheet, Built-Up Roof (BUR) and Liquid Applied Roof Assemblies for use in Class 1 and Noncombustible Roof Deck Construction. Recent revisions to FM 4470 and the rationale for those revisions will be provided. Real world performance of low slope commercial roof assemblies, as compared to the revisions will be discussed. The overall impact on the low slope commercial roofing market will be detailed.

Our Speaker: Mr. Mike Ennis

Mike Ennis has been Technical Director for SPRI, the Association representing Single-Ply Roofing Manufacturers and Component Suppliers since 2006. Prior to this he worked for The Dow Chemical Company for thirty years and was the North American Application Technology Leader for commercial products in Dow's Building Solutions business.

There he led the development of new products and applications. Mike has 35 years of building and construction experience to his credit.

Ennis is a Registered Roof Consultant (RRC) with RCI, Inc. and is Chairman of the Board of Directors of the Roofing Industry Committee on Weather Issues (RICOWI) and the Cool Roof Rating Council (CRRC). He is a member of ASHRAE and ASTM Committees D8 Roofing and Waterproofing, E5 Fire Standards, and E60 Sustainability.

Please join your colleagues on January 14, 2013.

WELCOME NEW MEMBERS

Please join me in welcoming the following new members to the CSC Toronto Chapter

Matt Paulus

Tremco Commercial Sealants and Waterproofing

Mr. Marc Kast

Getting to know Marc Kast

By: Stacey Bogdanow

Tell us a little about Marc Kast

I was raised in Montreal and attended high school there before moving to North Bay Ontario. I studied Business administration at Canadore College then moved to Toronto. I followed up with studies at Humber College majoring in accounting. I took a position with a newly formed company that sold equipment to the spray polyurethane foam industry as a sales representative. I proceeded to buy that company in the years that followed and I have sold, serviced and developed foam application equipment ever since. In 1999, I moved into the chemistry side of the business selling spray foam chemical systems. I have been actively involved in the development of the CAN/ULC national standards for spray foam insulation. I sit on various technical committees in both Canada and the US. I am a self-employed manufacturer's agent for Elastochem Specialty Chemicals Inc. a Canadian family owned and operated company from Brantford Ontario. My territory is Canada and the USA and I have distributors across both countries that I service.

How did you learn of CSC?

I have been active in development of foam specification for many years and have known of the association's existence. After some research by my assistant she recommended your group due to my new focus of driving foam specifications.

Why join CSC?

CSC's members are the target group that we have identified as the best route to get specs recognized in Canada

Do you plan on taking any courses?

Yes I plan on taking the PCD and CTR courses

Would you encourage others to become members of the CSC – Toronto Chapter?

Yes as a matter of fact I have convinced my manufacturer to sign up and have his technical sales force take the PCD and CTR courses as well I have decided that once I have completed each of the courses I will have my employees take them as well.

Education Certification Officer's Report

By: Paul Wong

Paul Wong
(Education Certification Officer)

CSC is preparing registration for our winter courses. This term, CSC is offering in class courses for the Construction Contract Administration, Specifier 1 and Technical Representative courses. These courses will be presented provided they have full enrollment.

Construction Contract Administration:

The Construction Contract Administration (CCA) course is designed for those individuals involved in construction administration. This includes contract administrators, property managers, architects, engineers, interior designers, specification writers, building authorities, and bonding and insurance agencies. The student will have successfully completed the Principles of Construction Documentation course.

This program will be held at the Northern District Library, located at 40 Orchard View Blvd., Toronto. This course is scheduled to commence on Monday, January 13th, 2014 and will run for 14 weeks ending on April 14th, 2014.

Technical Representative

The Technical Representative (TR) course will provide a better understanding of contract documents and bidding procedures, product representation, professionalism and ethics, and will provide a new depth of understanding and explanation of concepts beyond what was previously introduced in the PCD course.

The course is designed for the individual involved in the supply section of the construction industry, such as manufacturer representatives, agents or distributors of products.

This program will be held at the Alumicor Head office, located at 290 Humblin Dr., Toronto and will run for 16 weeks starting on Monday, January 13th, 2014

Specifier 1

Specifier 1 is an intermediate level course that will take the individual beyond the concepts previously introduced in the Principals of Construction Documentation (PCD) course. Although some of the same topics are included in this course, the depth of comprehension and explanation exceed that of the PCD course. The Specifier 1 course is a prerequisite for the Certified Specification Practitioner (CSP) designation from CSC. Successful completion of the course may be credited toward the experience component requirements for the Registered Specification Writer (RSW) designation.

This course will be offered only online for this Winter term. For detailed information, please contact the CSC Association office or visit <http://toronto.csc-dcc.ca/Education/CSC+On-Line+Courses/>

Registration Information

Visit <http://toronto.csc-dcc.ca/Education/Education+in+Toronto> for more information or to register. Register early to avoid disappointment. Please remember that registration and payment must be received prior to the issuance of a text book. All cancellations must be in writing. All cancellations are subject to a cancellation fee of \$40.00. Cancellations one week prior to the start of the course will be refunded up to 50 per cent of the registration fee. Cancellations after the start of the course will not be refunded.

If you have any questions about the courses listed above, please contact Paul Wong, Education Certification Officer via email at pwong.csc@gmail.com

Peer Discussion Group Update

The next Peer Discussion Group will be held on Thursday, January 23, 2014. If you are interested in participating to the discussion group, please email pwong.csc@gmail.com for further information.

Leverage the power of your network

By: Juste Fanou

Juste Fanou (Newsletter Editor)

Unless you've been living under a rock for the last few years, you have probably heard of the various social media platforms available on the market today. Names like Facebook, Twitter and Pinterest have all become part of our daily lingo and have given rise to all sorts of new neologisms. However, of all the services that one can choose from

today, no other lends itself to our business environments like LinkedIn. If used properly, the opportunities it affords to professionals like us can effectively be limitless. In this article I will try to suggest a few ways in which you can make the most out of this app.

Market yourself!

At its most basic level, LinkedIn is a public board for users to publicly display their resume, skills and qualifications. Thus, it is not surprising that a vast amount of people use it for that purpose alone. Crafting an interesting profile on LinkedIn can make you attractive to potential employers and headhunters. In order to make yourself reachable, be sure to use popular keywords in your profile to help it obtain prime ranking with search engines such as Google and Bing.

Strengthen your weak ties!

Stanford sociologist Mark S. Granovetter described interpersonal ties in his 1973 paper "The Strength of Weak Ties". In it, he argued that weak ties (i.e bonds formed from indirect relationships) allow us to access information from distant parts of our social networks. With technology rendering the speed of information almost instantaneous today, we should not miss on the opportunities that tools like LinkedIn offer to develop relationships and to share information. Such information is likely to come from like-minded professionals that may provide us with opportunities that we may have otherwise missed.

Seek help!

For most of us, the first thing we do when we come to a bind is to seek help from more experienced or more specialized members of our teams or networks. However since these are usually finite in size, some of the tougher questions are never answered properly or in a timely manner. Yet if we are somehow able to seek opinions from a bigger pool of experts, it is likely that we will also be able to increase the number of problems that we're able to solve. With its groups, discussions and forums, LinkedIn offers an excellent medium for posting problems and seeking opinions from other members. Nevertheless, it is important to note that care and discretion should be used when resorting to this strategy due to issues pertaining to liability and privacy. Thus, you should never post confidential information on any public forum.

LinkedIn is a powerful social media platform that is often misunderstood and underused. While many have termed it as the "Facebook of the professional world", it is my opinion that this description does not do it full justice as it can be used for much more than stalking ex-partners. Happy New Year to all!

Special Call to Sponsors!

By: Isabelle Champagne

HAMILTON/NIAGARA CHAPTER

MEETING NOTICE

LUNCHEON PRESENTATION

THIN-SET SURFACE RESTORATION AND

TOPCOAT REPAIR MATERIAL FOR

CONCRETE SUBSTRATES

When: Thursday, January 16, 2014 (Third Thursday)

Where: Royal Canadian Legion, 828 Legion Road, BURLINGTON, ON.

Time: Registration: 11:30 AM Lunch: 12:00 Noon
Presentation: 12:45 PM (Meeting to end by 2 PM)

Literature/Product Tables: Before Lunch & After the Presentation.

A Networking opportunity for manufacturers and suppliers.

Literature /product tables are available at \$50.00 each, book with Terry

Cost: \$25.00 Per Person, payable at the door. Receipts on arrival, ATM on site.
(Cheques payable to CSC Hamilton/Niagara Chapter).

Target Audience: Architects, Landscape Architects, Engineers, Specification Writers, Building Code Professional Owners, Property Managers, Contractors, Sub-Contractors, Restoration Contractors.

Qualifies for OAA Points

Provider: Finalcrete – Topic Information:

Thin-Set Applications. Finalcrete, originally intended for use as a thin surface restoration material for concrete substrates, polymer cement overlays were introduced into the architectural concrete and commercial flooring industries in the early 80's. Subsequently, its use in these industries has become standard. Polymer cement overlays are extremely economical in providing long term, durable renovation without the need for costly repairs that are typically associated with deteriorating concrete surfaces. Polymer cement overlays are used for interior and exterior applications ranging from:

Skim coat/broom finish concrete resurfacing – Restore and protect damaged, pitted, flaking and stained concrete back to the look of a new concrete surface. See our Sure Broom product for more information.

Concrete re-grading & and leveling – Repair and level concrete surfaces that have settled.

Existing substrate redecorating and renovating – After the appearance of existing concrete or wood substrates through applying “thin stamped” or “thin stained” overlays, creating new textures, colors and designs. For use on commercial or resident pool deck, this frequently takes the form of “splatter textures” or “knockdowns,” in which polymer cement is applied to the existing concrete

a trowel to slightly modify the appearance and feel of the finished application.

Deep Texture Stamped Concrete – Finalcrete stampable cementitious coating, designed for beautifying both interior and exterior concrete surfaces. When stamped, it creates a texture that can resemble a whole array of designs i.e. tile, cut stone, slate, brick, cobblestone, etc. Finalcrete offers concrete restoration, repair, resurfacing, architectural accenting and surface protection. Finalcrete liquid has Zero VOC's and is designed to have excellent bond in freeze thaw climates.

Light Texture (Sprayed Application) – Thin Overlay – Finalcrete is a trowelable or sprayable, cementitious coating for texturing both interior and exterior concrete surfaces. Finalcrete delivers a multitude of textures from: trowel down, wet bubble, stencil patterns, euro-stone, bubble texture, etc... Each design contributes to a non-skid cementitious surface. Typical areas of application include pool decks, patios, walkways, and driveways for both residential and commercial projects. Finalcrete is formulated to provide excellent bonding to new as well as existing concrete surfaces including freeze thaw climates.

Light Texture (Troweled Application) – Knockdown Overlay – Finalcrete is a trowelable or sprayable, cementitious coating for creating a knockdown texture for both interior and exterior concrete surfaces. The knockdown texture contributes to a non-skid cementitious surface. Typical areas of application include pool decks, patios, walkways, and driveways for both residential and commercial projects. Finalcrete is formulated to provide excellent bonding to new as well as existing concrete surfaces including freeze thaw climates.

Broomed "New Concrete" Texture – Broom Finish Overlay – Finalcrete is a cementitious coating that can be applied via trowel, squeegee, or sprayed. Finalcrete is designed for leveling and retexturing both interior and exterior concrete surfaces. When broomed, it creates a texture that resembles freshly poured and broomed concrete. Typical areas include parking decks, driveways, sidewalks, parking lots or any horizontal concrete surface requiring repair of spalled areas, low spots, etc. Finalcrete is applied with a base coat using squeegees, and then broomed. When applied properly the newly broomed surface creates a slip resistant finish that is ready to be sealed to protect against staining. Finalcrete is suitable for heavily trafficked areas and is formulated to provide excellent bonding to new as well as existing concrete surfaces including freeze thaw climates.

Presenter – Greg Brownless - President.

After building up one of the largest diagnostic laboratories for animal health known as Vita-Tech in Canada which was acquired by an American firm, Greg Brownless began the start-up company Avrocon Industries Inc. and as President taken the start-up to a distribution level which includes Ontario and Western New York. Prior to starting the package concrete material business he began his business consulting career supporting marketing initiatives and new product launches in the consumer graphics industry. A designed departure into the organizational effectiveness field with Learning International built his foundation for implementing strategic initiative the improve the way corporations serve and develop their customers. With the advent of converging interdependence between marketing communications and information technology he has been responsible with developing Web based applications on both sides of the firewall for many organizations and won the prestigious award of IT Champion in 2005. Greg is know for his presentation workshops and has delivered several sales programs supporting business plans for both increased revenue growth and sales effectiveness. His understanding of the interdependence between high performance people systems, and organization effectiveness has enabled him to develop and deliver "best practice" interventions with many organizations. Greg relaxes by spending time skiing in winter, boating in summer, and golfing whenever possible.
