

FIT TO FLY
CERTIFICATE OF CONFIRMATION: SARS-COVID-2 TESTING
PERFORMED BY RT-PCR METHOD

MyHealthcare Clinic Wandsworth Testing Centre
Baltimore House, Juniper Drive, Battersea Reach
London
SW18 1TS

Date: 05/02/2021

Patient Name: Naeem-UI-Hasan Qummi

Patient DOB: 29/01/1971

Laboratory URN: R400826529

Passport Number: 520511654

TO WHOM IT MAY CONCERN

The above patient had a COVID-19 Nasopharyngeal (throat and nasal) swab test performed by a healthcare professional to check for active infection to coronavirus on 04/02/2021 at 16:50.

The result is **negative** indicating the patient does not have the coronavirus infection at the time of testing and is fit to fly.

Technical Notes: The RT-PCR test was performed using a Nasopharyngeal (throat and nasal) swab. A sample is prepared by extracting the chosen section of the genome, and then PCR (Polymerase Chain Reaction) techniques amplify the genome section ready for detection. This type of test detects the RNA (Ribonucleic acid) contained within the SARS-CoV-2 virus.

The RT-PCR swab was tested at 'Randox Clinical Laboratory Services' which is a UKAS accredited and Public Health England endorsed laboratory.

Yours sincerely

Dr Akash Patel MBBS BSc (Hons) MRCGP
